

Klik 5m USB 3.0 Active Extension Cable - A Male to A Female

Product Brief

The USB 3.0 specification limits the length of a cable segment between the host or hub and device to 5 metres. This USB 3.0 active extension cable takes the signal from the first device and resynchronizes and retimes the signal so it can be transmitted another 5 metres without any loss of data. You can daisy chain a maximum of three active extension cables to give you a maximum extension length of 15 metres.
