

Model: CUHV01
USB 3.0 to HDMI Adapter

User Manual v1.1

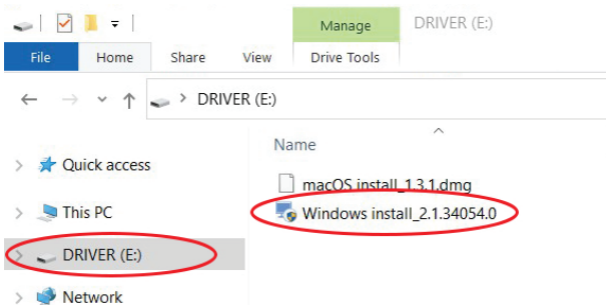

Features

- Connect a Windows desktop computer or laptop with a standard USB-C or USB-A 3.0 port to a monitor or display using an HDMI cable
- Works with all USB-C ports, including those that do not support DP Alt Mode
- Works with Windows computers only and is not compatible with Mac, MacBooks or Chromebooks
- Supports duplicate or extend mode for Windows
- Supports Full HD resolution up to 1920 x 1080 @60Hz
- Supports Windows 11 / 10 / 8 / 7

Installation

- Connect the USB to HDMI adapter to a USB-C or USB-A 3.0 port on your Windows computer (USB 3.0 ports are typically blue in colour).
- If connected to a USB 2.0 port, the max resolution is 800 x 600.
- The system tray in the bottom right of the screen will indicate the system is installing drivers.
- When the drivers have finished installing a new drive will appear in Windows File Explorer. Click on the drive and then double click on the Windows install file to install the software.

- Follow the on-screen prompts to install the software.
- When installation is complete, remove the adapter and restart the computer.
- After restarting the computer, connect the adapter to a USB 3.0 port and Windows will automatically detect the 2nd monitor.
- It may take up to 20 seconds for your 2nd monitor to appear depending on your computer.

Trouble Shooting

- Confirm that your computer is running Windows 11 / 10 / 8 / 7. This adapter does not support older versions of Windows, Mac OS, or Chrome OS.
- To support 1920 x 1080, you must connect to a USB 3.0 port which are blue in colour. If connected to a USB 2.0 port, the maximum resolution is 800 x 600.
- To complete installation you must restart your computer.
- Remove the adapter before restarting your computer.
- If the new drive does not appear in Windows File Explorer, you can download the installation software from the below link under the Downloads tab.
